

ASTI – 2013 Ammonia Safety Days

Hello Everyone,

The Ammonia Safety Training Institute is setting up safety day events across the country for 2013. Companies like yours are instrumental in helping us to fund the safety days. We thank the national sponsorship and table top exhibitors who helped us to fund 14 Safety Days we performed in 2012. We are recruiting additional sponsors and exhibitors to help us fund the 2013 Safety Days!

We are expanding the agenda and the audience for the Safety Day subject matter. We are generating more support from the ammonia producers, distributors, and a wider variety of end-users of ammonia. Airgas, Hill Brothers Chemical, Grammer Industries, and Canadian Pacific Railroad are joining our efforts to recruit national sponsors.

This year's program will be focusing on safety and emergency response. ASTI will also continue to promote the value of cooperation between the industry, public safety, and government agencies. We hope the ASTI One Plan will help first responders to learn more on how to work as a team to prevent or stop emergencies when they are small. We want to make ammonia one of the safest managed hazardous materials in the World.

Our feature presentation this year will be about Jose Mata and his family. Jose is an ammonia system operator who was injured during a large anhydrous ammonia release. ASTI created a video about the story of what happen and how Mata family dealt with Jose's accident. Jose has agreed to travel to the safety days and talk about the accident and how his training helped him to survive exposure to the anhydrous ammonia dense gas cloud.

Below are the ASTI Safety Days Schedule of 2013 as of April.

Ocala, Florida	April 17, 2013
Atlanta, Georgia	April 26, 2013
